

Behind the facade: the details

Daniel Mettler, Daniel Studer, ETH Zürich - BUK (Eds.)

Made of Concrete

Approx. 108 pages | 18 Figures (bw)

The publication presents an analysis of 16 selected Swiss concrete buildings in scales 1:10 and 1:1 using large-scale detailed isometric drawings. The buildings represent examples of the diverse methods available for using concrete to build contemporary architecture. Series of images on the construction processes and texts on the architectural / construction methods, and a systematic overview of the construction principles of building envelopes, provide the reader with a new, deeper understanding.

The book is the result of in-depth research by the authors at the Architecture Department of the ETH Zurich. It demonstrates the innovative strength of Swiss architectural production, which combines current technical requirements with sophisticated building culture.

Daniel Mettler, Daniel Studer

Architects, Lecturers at the Department of Building Technology and Construction (BUK), ETH Zurich

Insights into concealed concrete construction

From the construction site to the completed detail

Current Swiss buildings by Christ & Gantenbein, Christian Kerez, Valerio Olgiati, and many others
